TIMOTHY CLOETE

SOFTWARE ENGINEERING STUDENT

Hoërskool Oos-Moot
Matriculated 2018
Subjects:
- Afrikaans
- English
- Life-orientation
- Math
- Geography
- Business Studies
- IT

Belgium Campus
2019 - 2022
3rd year student currently studying towards a Bachelor's degree of Computing

The degree focus on the following:

Troubleshooting and formulating viable solutions using computing skills. Enable one to apply theories and integrate them in real-world environments, across multiple disciplines, by presenting best practices and solutions.

The curriculum contains the theoretical foundation for the conceptualization and modelling of solutions, the use of abstract, analytical and critical thinking, and it refines the student's ability to recognize and solve problems.

Practical assignments and projects completed in this degree are aligned to daily practices in the working world. Assessments do not only focus on the academic content but also check on the practical implementation. Working in teams and on simulated projects enable the student to acquire business-specific and 'soft skills', including communication skills, customer satisfaction training, the ability to work as a team player/team leader, and the ability to teach others.

In my fourth year, I hope to find an opportunity to complete an internship at a national or international company. During this year I will be required to conduct academic research and present my findings in a formal dissertation.

I am pursuing an internship where I can complete the practical component of my studies with a focus on my specialization in Software Engineering

SUMMARY

An energetic and passionate college student working towards completing his bachelor's degree in Computing at Belgium Campus. Aiming to use my knowledge that I have learned from my coursework as well as the self-study combined with my hard work to satisfy my internship at your organization and the willingness to learn more from this internship.
